HISTORICAL THERMAL TEMPLE

The Ancient Romans were aware of the healing power of the springs at Rimske terme. They attributed their recoveries to the eternally young water nymphs who supposedly lived in the thermal water.

The old belief in the healing power of water has also been confirmed by official science. Thermal water is also called acrothermal water since it not only contains numerous microelements, but also radon gas, which is particularly healing in small quantities.

The positive effects of the baths are based on people's stories and monuments erected in gratitude for recovery. Give yourselves up to the Roman medicinal springs, boost your immune system, and restore your life energy in a mighty and rich ambience with a 2000-year tradition.

Baths are prepared specifically for you; they are filled with pure thermal spring water (balneologists advise that all baths

in pure thermal water should last 20 minutes, thus spring water is added for longer baths).
